

# Read Before You Paint

Read these important instructions **before** using Waterproof Outdoor Fabric Paint.

## BEFORE YOU BEGIN

- ➔ **Carefully read these instructions in their entirety and the instructions on the can before spraying your project.**

This paint is specialty paint. It acts like a dye or a stain and sprays unlike any other spray paint.

For Outdoor Fabric Paint instructions, see back of pamphlet.

- ➔ **Test the material with water.**

Test material for absorbency by sprinkling water on the fabric. If water beads up, it is no good. If water soaks in, it is okay to test paint on a hidden area of your project.

The color on the can is based on spraying white fabric. The underlying fabric color will change how the paint looks. We do not recommend radical color changes. You can go light to dark, but not dark to light. **Test on a hidden area of your project before proceeding.**

## TESTING THE PAINT

- ➔ **Test the paint on a hidden area of your item and let it dry for 72 hours before spraying the entire thing.**

**DO NOT OVER SHAKE THE CAN.** If the paint adheres to the hidden area and you are satisfied with the results **AFTER** is it fully dry, only then should you proceed to spray the rest of the piece. PLEASE SEE INSIDE FOR FURTHER INSTRUCTION.

## PAINTING YOUR PROJECT

- ➔ **DO NOT open multiple cans at once.**

If there's a problem, STOP opening cans and call us at (401) 769-8800, 10:00 AM–5:30 PM, Monday–Friday. We cannot reimburse for opened or used cans.

- ➔ **Prep your work area and cover areas you do not want paint on.**

Use painter's tape, plastic, and cardboard to adequately protect any surfaces from unwanted paint. This paint will not wash out.

To prevent drips, start and stop spraying off of your project.

- ➔ **Pull the can's trigger back all the way.**

This will create a wide, conical spray that's easy to control and apply. If you pump or pull the trigger partially, you will allow the propellant to escape without paint. This wastes propellant and will ultimately render the can useless.

## PAINTING YOUR PROJECT, continued

**Practice.** At first the paint may shoot out. Do not be alarmed. Keep full tension on the trigger until a cone spray appears. Please note that young children often need help spraying.

- ➔ **Keep the can upright while spraying.**

There is a tube attached to the spray mechanism (like a Windex bottle). If the can sputters, tilt the can upright so that paint will be in the tube. To avoid sputtering and wasting propellant, keep the can upright as much as possible when spraying. Tilting your project is okay but return it to its flat position to avoid drips.

- ➔ **Several coats look better than one heavy coat.**

Less is more. Do not soak your project with paint. Paint evenly but not heavily. It may look like nothing is happening, but **resist the urge to use more paint.** Let paint dry for about 20 minutes before applying a second coat.

See cleaning instructions below to prevent paint from drying inside the nozzle.

- ➔ **It's best to use the entire can in a single application.**

However, you may reuse the can if you clean the nozzle.

- ➔ **What if the can doesn't spray?**

**DO NOT OVER SHAKE THE CAN.** It is rare that you will have a bad can. First, make sure the can's top is on tight. If it is, tug the trigger forward and push back gently to reset it.

Sputtering may mean there is an internal spring that is stuck. If this seems to be the case, give the top of the can a firm tap or bang it on a hard surface to dislodge the spring.

If the problem persists, please call 1.401.769.8800 **BEFORE** opening any additional cans.

- ➔ **How to Clean for Storage**

Turn the can upside down. Spray until it sprays clear. Rinse the nozzle with water until it's clean. Store the can upside down with the nozzle submerged in water (e.g., in a plastic cup).

## CONTACT US

# Upholstery Fabric Paint

Spray your furniture back to life.

## BEFORE YOU BEGIN

### Test the paint **FIRST**.

**IMPORTANT** When painting furniture, be sure to do a **COMPLETE TEST** on a hidden area that matches the surface fabric. Let the paint dry completely over three days, then check to make sure your paint adheres to the fabric and that you're satisfied with results before starting your project.

Only open one can at a time. We are not responsible for the results of your painting project and cannot credit for opened cans or damaged furniture.

**PLEASE NOTE** The color of these paint products may vary from the colors printed on this page. Depending on the original color and material of your project, the paint color will vary due to blending. Test the paint on a hidden area of your project first to confirm you are satisfied with the resulting color.

## Upholstery Painting Tips & Techniques

This eight-ounce Upholstery formula is specifically designed for high-contact surfaces such as seats, couches, or hammocks. There is UV protection for outside use.

Do not use upholstery spray if you intend to put the piece through the washing machine.

This paint does not work on shiny, stain-protected, or waterproofed material.

Spruce up the porch furniture with some cans of Navy Upholstery Fabric Spray Paint for a fresh new look.

**Always test first.** If you cannot paint-test the area, use water to see if it soaks in or beads up. **If it beads up, do not continue painting** and call us to return unopened cans.

**Make sure to test on an unworn area.** Stain-proofing tends to wear off over time where people sit. **Test an area that gets little wear to ensure paint adheres** to entire project. You will also need to determine how much paint you need.

Buttons and folds can be tricky to spray. We suggest rubbing in the paint with a rag as you spray to get all the nooks and crannies.

**For Velvet** The paint sticks to the hairs. Brush with a cloth after it's dry to soften.

**For best results, fabric must be dry, clean, and free of body oils.**

Give your couches and lounge seats a modern makeover with our Sage Green Upholstery Fabric Paint.

Revive sun-faded outdoor cushions with a bold new color to brighten up the yard and pool deck for spring and summer.
